Table 8 2	Insecticides for con	tral of arthropod post	e of ornamentale	listed by product trade name

Trade Name	Chemical Name/Formulation	EPA Reg. No.	REI§	Chemical Class ¹
Acephate 97 UP	acephate 97.4% DG	70506-8	24	1B

Registered against: aphids, leafrollers, mealybugs, scale (crawlers), thrips, whiteflies
For use on certain greenhouse floral and foliage plant crops, and outdoor floral crops and ground covers.
Application to poinsettias after bract formation may result in phytotoxicity on certain varieties. Do not apply to roses or chrysanthemums with open blooms. Some phytotoxicity has been observed on certain foliage plants and some chrysanthemum varieties. See label for complete plant list, rates, and specific instructions.

 Adept
 diflubenzuron 25% WP
 400-477
 12
 15

Registered against: armyworms, fungus gnat larvae, leafminers (leps), shore fly larvae, whiteflies (suppression)

For use in enclosed commercial structures such as greenhouses, shadehouses, and lathhouses only. Product works by disrupting normal molting processes of insect larvae. Apply as soil drench or coarse spray to soil surface for control of certain soil-inhabiting insects. Do not reuse potting media that has been treated with product. For optimum control when applying as a soil treatment, it is recommended that breeding areas under benches and other non-crop areas be treated at the same time as crop is treated. For control of certain foliar-feeding insects, apply as foliar spray. Do not apply to poinsettias, hibiscus, or Rieger begonia. When using as a foliar spray to control whitefly, use product in combination or in rotation with other effective insecticides. Do not apply to pots grown on capillary water mats. See label for specific rates and instructions.

Akari fenpyroximate 5% 71711-4 12 21

Registered against: mites

For use on greenhouse ornamental, floral and foliage crops, indoor ornamental plantings and plantscapes. Apply as a foliar spray, and good coverage Is necessary. Product stops mite damage immediately after application and provides stop-feeding action together with a cessation of egg laying, and mites die in 4 to 7 days. Do not apply more than 48 fl oz of product per crop cycle or per growing season, whichever is longer. Do not apply product in successive miticide applications in the same greenhouse, allow at least 2 different chemicals with different modes of action to be used between treatments. See label for plant list, rates, and specific instructions.

*Ambush 25W permethrin 25% WP 5481-502 12 3

Registered against: caterpillars

Trade Name Chemical Name/Formulation EPA Reg. No. REI§ Chemical Class¹

For use on nursery stock, field-grown and greenhouse roses. Apply as a foliar spray. Avoid spraying chrysanthemum blooms, not all cultivars have been tested for phytotoxicity. Application to blooms may cause petal browning. See label for plant list, rates, and specific instructions.

Ardent 0.15EC abamectin 2% EC 100-896 12

Registered against: aphids (suppression), leafminers, mites, thrips (suppression), whiteflies (suppression) For use on shadehouse, greenhouse, field-grown ornamentals, and foliage plants. Apply as foliar spray. Do not apply less than 8 fl. oz. or more than 16 fl. oz. per acre. Do not make more than six applications per copping cycle. Do not use more frequently than at seven-day intervals. Rotate with products that have different modes of action. Do not use product for suppression of aphids, whiteflies, and thrips on roses, chrysanthemums, and gerbera. These ornamentals are primary hosts of mites and Liriomyza leafminers for which product applications should be targeted. Not recommended for use on ferns and Shasta daisies. See label for resistance management techniques and specific rates and instructions.

*Aria flonicamid 50%WDG 279-3287 12 90

Registered against: aphids, mealybugs, thrips, whiteflies

For use on herbaceous and woody ornamentals, annuals and perennials in greenhouses. Product is packaged in water-soluble packets. Product stop insect feeding with 30 minutes, but insects may remain on plants for up to 5 days. Product has residual control. Treat when insects appear. For improved knockdown of heavy infestations, apply as a tank mix with a pyrethroid or other fast acting material. Do not apply this product more than two times consecutively before rotating to another chemistry. Certain pansy cultivars have exhibited sensitivity to product. See label for specific rates and instructions.

*Astro permethrin 36.8% EC 279-3141 12 3

Registered against: ants, aphids, armyworms, Japanese beetles, lace bugs, leaf-feeding caterpillars,

Registered against: ants, aphids, armyworms, Japanese beetles, lace bugs, leaf-feeding caterpillars, leafhoppers, leafminers, leafrollers, lygus bugs, mealybugs, plant bugs, root weevils (adults), whiteflies

For use on ornamentals in greenhouses, landscaped areas, and field- and container-grown foliage and flowering plants. Apply when insects appear or feeding is noticed. Higher rates should be used as pest populations increase. Direct application to blooms may cause browning of petals. Marginal leaf burn may occur on Salvia, Dieffenbachia, and Pteris fern. See label for specific rates and instructions.

Attain TR bifenthrin 4% 499-472 12

Registered against: aphids, caterpillars, fungus gnats, leafrollers, mealybugs, mites, plant bugs, scale, thrips, whiteflies

For use on greenhouse bedding plants, cut flowers, flowering hanging baskets, foliage plants, potted flowering plants, and ornamentals. For best results apply during early evening when foliage is dry and temperature is between 60-80°F. Greenhouse should be ventilated before reentry. Do not re-apply product within 48 hours of a previous application. See label for plant list, rates, and specific instructions.

Avatar acephate 75% SP 81964-2-81943 24 1B

Registered against: aphids, beetles (Japanese), leafrollers, mealybugs, plant bugs, scale (crawlers), thrips, whiteflies

For use on greenhouse floral and foliage plant crops, and outdoor floral crops and ground covers. Do not apply to chrysanthemums and roses with open blooms. Phytotoxicity has occurred on poinsettia after bract formation. Certain chrysanthemums and specific foliage plants have exhibited phytotoxicity after product application – see label for list of specific varieties. See label for plant list, rates, and specific instructions.

Avid 0.15EC abamectin 2% EC 100-896 12 6

Registered against: aphids (suppression), leafminers, mites, thrips (suppression), whiteflies (suppression)
For use on shadehouse, greenhouse, field-grown ornamentals, and foliage plants. Apply as foliar spray.
Product has translaminar properties. Do not apply less than 8 fl. oz. or more than 16 fl. oz. per acre. Do not make more than six applications per copping cycle. Do not use more frequently than at seven-day intervals.
Rotate with products that have different modes of action. Do not use product for suppression of aphids whiteflies, and thrips on roses, chrysanthemums, and gerbera. These ornamentals are primary hosts of mites and Liriomyza leafminers for which product applications should be targeted. Not recommended for use on ferns and Shasta daisies. See label for resistance management techniques and for specific rates and instructions.

Aza-Direct azadirachtin 1.2% 71908-1-10163 4 unknown

Registered against: aphids, beetles, caterpillars, flies, fungus gnats, true bugs, leafrollers, leafminers, mealybugs, midges, mites, psyllids, plant bugs, scale, thrips, weevils, whiteflies

For use as a drench or as a foliar spray on plants grown in greenhouses, shadehouses, and nurseries. Product controls target pests on contact or by ingestion. The product acts on pests by way of repellence, antifeedance and interference with the molting process. Apply when insects appear or feeding is noticed. The optimum pH range for application is 5-6.5. If needed, the pH of the water can be adjusted by use of a suitable buffering agent. Product can be used on vegetables, herbs and spices, and other miscellaneous crops. See label for specific rates and instructions.

Azatin XL azadirachtin 3% EC 70051-27-59807 4 unknown

rade Name Chemical Name/Formulation EPA Reg. No. REI§ Chemical Class

Registered against: aphids, armyworms, beetles, black vine weevils, caterpillars, chafers, cutworms, fungus gnats, leafhoppers, leafminers, leafrollers, mealybugs, sawflies, shore flies, thrips, whiteflies

Can be used indoors and outdoors on ornamentals and horticultural crops. Maintain dilute Azatin solutions at a pH between 3 and 7, and apply solution soon after preparation. Controls insect larvae when they ingest or come in contact with it. Interferes with insect's ability to molt. Product can be used as a soil drench for controlling soil-borne insect larvae – apply to moderately moist soils. Thoroughly wet the soil with product, but do not apply to the point of excessive drip from pots. See label for specific rates and instructions.

Beethoven TR etoxazole 5% aerosol 499-533 4 (See 10B notes.)

Registered against: mites, whiteflies (suppression)

REI is 24h without ventilation. For use on all ornamental crops in greenhouses. Apply product when pest (or plant damage typical of an indicated pest) is seen. For best results, apply during early evening when foliage is dry and greenhouse temperatures are between 60-80°F. See label for specific instructions.

*Benefit 60WP imidacloprid 60% 42750-153- 12 4/-58185

Registered against: aphids, beetles (larvae), black vine weevil, caterpillars, fungus gnats (larvae), lace bugs, leafhoppers, leafminers, mealybugs, sawflies (larvae), scale, thrips (suppression), weevils (root), whiteflies For use on ornamentals in greenhouses, nurseries, and interior plantscapes, also can be applied to grassy areas in nurseries for certain insect control. Product is systemic and can be applied as a foliar spray, or can be applied to the soil media. Product comes in water-soluble packets. Product can also be used in ebb and flood applications. No soil injection on Long Island. Do not apply product to soils that are water logged or saturated. See label for plant list, rates, and specific instructions.

BioBit HP Bacillus thuringiensis subsp. 73049-54 4 11B2 kurstaki 58.2% WP

Registered against: caterpillars

For use on flowers, bedding plants, ornamentals, and greenhouse crops. May be used to control small immatures; apply when eggs start hatching and larvae are small. Must be ingested to be effective, so thorough coverage is essential. Larvae must be actively feeding on treated, exposed plant parts. See label for specific rates and instructions.

BotaniGard 22WP Beauveria bassiana 22%WP 82074-2 4 Biological Strain GHA

Registered against: aphids, mealybugs, thrips, weevils, whiteflies

For use on ornamentals and vegetables in indoor and outdoor nurseries, greenhouses, shadehouses, commercial landscapes/interiorscapes, and on turf. Designed for application without additional wetting agents and spreaders. Do not tank mix with fungicides. Acts by contact: spores must attach to cuticle of target insect to be effective, so thorough coverage is essential. Most effective when used early, before high insect populations develop. Typically it takes three to seven days for insects to die and 7 to 10 days after first spray to see a reduction in an insect population. Product may be used as a pre-plant dip for cuttings. For soil applications do not apply to water-saturated soils. See label for plant list, rates, and specific instructions.

BotaniGard ES

Beauveria bassiana

Strain GHA 11.3%ES

82074-1

4

Biological

Registered against: aphids, beetles, mealybugs, plant bugs, thrips, weevils, whiteflies

For use on ornamentals and vegetables in indoor and outdoor nurseries, greenhouses, and landscapes. Acts by contact: spores must attach to cuticle of target insect to be effective, so thorough coverage is essential. Most effective when used early, before high insect populations develop. Typically it takes three to seven days for insects to die and 7 to 10 days after first spray to see a reduction in an insect population. Do not tank mix with fungicides. See label for plant list, rates, and specific instructions.

Citation cyromazine 75% WP 100-667 12 17

Registered against: larvae of dipterous leafminers, fungus gnats, shore flies

For use on landscape ornamentals, container-grown ornamentals, greenhouses, lath and shadehouses, and ornamental crops. For use on shore fly larvae only on greenhouse ornamental crops and in interiorscapes. Product is an insect growth regulator and will not kill adult insects. Rotate with insecticides that have different modes of action for leafminer control. Product comes in water-soluble bags. See label for specific rates and instructions.

Conserve SC spinosad 11.6% SC 62719-291 4 5

Registered against: ants (fire), beetles, caterpillars, gall midges, leafminers, mites, shoreflies, sawflies (larvae), thrips

For use on ornamentals in nurseries, greenhouses, lath houses, shadehouses, or growing outdoors. Fermentation-derived insect control agent; because of its unique mode of action, can be used in resistance management programs in rotation with any other class of products. Product should not be used more than 10 times in a 12 month period, and for control of leafminers, spider mites, or diamondback moths do not apply more than 6 times in 12 months. Except for greenhouses and structures that can be altered to be closed or open, do not reapply within less than 7 days. Product is a Group 5 insecticide and users should follow

Trade Name	Chemical Name/Formulation	EPA Reg. No.	REI§	Chemical Class ¹
*Mesurol Pro	methiocarb 2% G	10163-228	24	1A

Registered against: slugs, snails, sowbugs

For use on ornamental plants growing in nurseries and greenhouses and for established ornamental plantings. Product is a bait and should be broadcast over plant foliage or applied to soil around plants. For best results, lightly water area to be treated before applying bait. See label for complete plant list, rates, and specific instructions.

Millenium Steinernema carpocapsae NA NA Biologica

Registered against: black vine weevils (larvae), caterpillars, shoreflies (larvae)

Can be used on ornamental plants in nurseries, greenhouses, landscapes, and interiorscapes. Product is a naturally occurring, insect-parasitic nematode that seeks out fungus gnat larvae, enters their natural body openings, and releases symbiotic bacteria that kill the pests. Can be used as a preventive or a curative control. Apply as soon as possible after potting or placement in the greenhouse. Works best in soil at temperatures from 50-90°F. Apply solution to moist soil or growing media. See label for complete plant list, rates, and specific instructions.

Molt-X azadirachtin 3% 68539-11 4 unknown

Registered against: whiteflies, leafminers, soft scales, mealybugs, thrips, aphids, lacebugs, fungus gnats (larvae), shore flies (larvae), various bugs, caterpillars, beetles, weevils

Follow label directions. Molt-X is an insect growth regulator and does not control adult insects. However, Molt -X is also effective as a repellent towards adults of some species. Controls insects in the larval, pupal, and nymphal stages by interfering with the metabolism of ecdysone. For use as a drench or as a foliar spray on plants grown in greenhouses, shadehouses, and nurseries. Product can be used on vegetables, herbs and spices, and other miscellaneous crops. Molt-X will break down in the spray solution if not used within 8 hours. Molt-X will break down in spray tank mixtures that have pH values exceeding 7.0. The recommended pH range is between 5.5 and 6.5. Apply when insects appear or feeding is noticed. If needed, the pH of the water can be adjusted by use of a suitable buffering agent. Product can be used on vegetables, herbs and spices, and other miscellaneous crops. See label for specific rates and instructions.

M-Pede potassium salts of fatty acids 62719-515 12 NS 49% EC

Registered against: aphids, caterpillars, earwigs, lace bugs, leafhoppers, mealybugs, mites, plant bugs, sawflies, scale, thrips, whiteflies

For use on greenhouse and outdoor ornamentals. Kills by contact so complete coverage is essential. Do not use if plants are stressed, such as under hot, humid, or drought conditions. Use soft water for best results. Follow label directions to avoid phytotoxicity. Do not use on new transplants, unrooted cuttings, or plant material stressed by drought. Test *Euphorbia* for phytotoxicity before full-scale application. If wilting occurs on sprayed plants within a few hours, rinse with a clean water spray. Avoid application when leaf temperature exceeds 90°F. Mixing soap with other insecticides may increase effectiveness and retard the development of insecticide resistance. The resulting mixture may be more phytotoxic, however, so exercise caution. Potential for plant injury increases when this product is used and the pH of the final solution is lowered below 8.0. See label for specific rates and instructions.

Nemasys Steinernema sp. 27% NA NA Biological

Registered against: fungus gnat larvae, thrips (Western Flower)

Can be used on ornamental plants in nurseries, greenhouses, landscapes, and interiorscapes. Naturally occurring, insect-parasitic nematode that seeks out fungus gnat larvae, enters their natural body openings, and releases symbiotic bacteria that kill the pests. Can be used as a preventive or curative control. Apply as soon as possible after potting or placement in the greenhouse. Apply solution to moist soil or growing media. See label for complete plant list, rates, and specific instructions.

Nemasys-H Heterorhabditis megidis NA NA Biological

For use in container-grown crops. Controls the larval stages of black vine weevil. Product is a naturally occurring, insect-parasitic nematode that enters larvae and releases symbiotic bacteria that kill the target pest. Soil or media temperatures should be between 50° and 86° F for at least two weeks after application. Soil should be moist prior to, during, and after application. See label for complete plant list, rates, and specific instructions.

1300 Orthene TR acephate 12% TR 499-421 24 1B (Prescription

Registered against: aphids, caterpillars, fungus gnats, lace bugs, leafminers, leafrollers, lygus bugs, mealybugs, mites, scale, thrips, whiteflies

For use in commercial greenhouses. Apply during early evening when foliage is dry. Greenhouse temperatures should be between 60° and 80°F for best results. Greenhouse should be ventilated before reentry. See label for complete plant list, rates, and specific instructions.

Ovation SC clofentezine 42% SC 66222-53-58185 12 10A

Registered against: mites

Treatment)

Trade Name Chemical Name/Formulation EPA Reg. No. REI§ Chemical Class

For use on ornamentals in greenhouses, saran, and shade houses, outdoor container, and field grown nursery stock. Product is highly active on mite eggs and early mite stages. It has shown activity and persistence up to 45 days after application. Product is magenta in color and may leave a residue on light colored flowers or foliage. Spray application should be directed in a manner to cover all plant surfaces, especially the undersides of leaves. Product is recommended only once per cop cycle in greenhouse, saran, and shade house culture. See label for plant list, rates, and specific instructions.

Overture 35 WP pyridalyl 35% 59639-125 12 M5

Registered against: caterpillars, thrips

For use on greenhouse grown ornamentals, including flowering and foliage crops, ground covers, shrubs and ornamental trees, and non-bearing fruit and nut trees grown indoors. Product controls insects by both contact and ingestion activity and also has translaminar activity on a variety of plants. To optimize resistance management practices, do not apply product more than three times per cropping cycle or no more than three times per six months. See label for plant list, rates, and specific instructions.

Pedestal novaluron 10% 66222-40-400 12 15

Registered against: armyworms, leafminers (suppression only), thrips, whiteflies

For use on container grown ornamentals in greenhouses, shadehouses, and nurseries. Product is an insect growth regulator and is applied as a foliar spray. Product affect developing immature stages of insects by disrupting the molting process, and fully developed adult stages of the pest are not affected. Do not use product more than once within each generation cycle and do not make more than two applications per crop per year. Do not apply to poinsettias. See label for complete plant list, rates, and specific instructions.

*Perm-Up 3.2EC permethrin 36.8%EC 70506-9 12 3

Registered against: ants, aphids, caterpillars, fungus gnats, lace bugs, leafhoppers, leafminers, leafrollers, mealybugs, plant bugs, sawflies, thrips, whiteflies

For use on chrysanthemums, field-grown ornamentals, nursery stock, field-grown and greenhouse roses. Apply product when insects appear or feeding is noticed. Use higher rates as pest populations increase. Avoid spraying chrysanthemum blooms; not all cultivars have been tested for phytotoxicity. Marginal leaf burn has been noticed on Salvia, Dieffenbachia, Pteris fern. Application to blooms may cause petal browning. See label for complete plant list, rates, and specific instructions.

*Pounce 25 WP permethrin 25% WP 279-3051 12 3

Registered against: caterpillars, lace bugs, leafhoppers, leafminers, whiteflies

For field-grown ornamental nursery stock, chrysanthemums, field grown and greenhouse roses. Apply when insects appear or feeding is noticed. Avoid spraying blooms of chrysanthemums. Leaf burn may occur on salvia and Pteris fern. See label for specific rates and instructions.

Precise acephate 4% G 84886-2 12 1B

Registered against: ants, aphids, black vine weevil, mealybugs

For use on greenhouse, lathhouse, shadehouse, and outdoor container—grown nursery stock. Product is a water-soluble granular insecticide that is readily absorbed by plant foliage and roots to provide systemic control of feeding insects. Do not apply to freshly rooted cuttings. Can be used on limited greenhouse crops. See label for complete plant list, rates, and specific instructions.

 Preclude TR
 fenoxycarb 4.8% TR
 499-437
 12
 7B

Registered against: aphids, caterpillars, leafminers, mealybugs, scale, thrips, weevils, whiteflies

For use in greenhouses. Apply in early evening when foliage is dry. Greenhouse temperatures should be between 60° and 80°F for best results. Product is an insect growth regulator. Initially two applications should be made one week apart. Additional applications should be made as necessary, but not more than one time per week. See label for specific rates and instructions.

*Prentox Pyronyl Crop pyrethrins (6%) + 655-489 12 3 + 27A Spray piperonyl butoxide (60%) EC

Registered against: ants, aphids, beetles, caterpillars, earwigs, fungus gnats, grasshoppers, lacebugs, leafhoppers, leafminers, leafrollers, mealybugs, millipedes, mites, pillbugs, sowbugs, spittlebugs, springtails, thrips, whiteflies

May be used on greenhouse and outdoor ornamentals, herbs, and spices. May be combined with other insecticides for a quicker and more complete kill where insect resistance may a problem, and as an insect "exciter" to flush insects out of hiding and into contact with other spray residues. If use of a spreader/sticker spray adjuvant is desired, use a natural vegetable oil product. See label for specific rates and instructions.

***ProMITE 50WP** fenbutatin 50%WP 67690-40 48 12B

Registered against: mites

For use on greenhouse and outdoor ornamentals. For best results apply when mite populations are just beginning to build. Product performs best when the daily temperature averages above 70°F. Product comes pre-measured in water-soluble bags. Do not use in sprayers that have any residues of boron or chlorine, as the soluble bag will precipitate in the tank. Apply only to the foliage of chrysanthemums (pre-bloom) and

spray – see label for rates and recommendations. To aid in preventing insect resistance, products from other chemical classes should be included with or alternated with this product in a spray program. Additional restrictions regarding applications near water are in effect in New York state. See label for specific rates and instructions.

 Tame/Orthene TR
 fenpropathrin 1% + acephate
 499-441
 24
 3 + 1B

 1.5%

Registered against: aphids, caterpillars, fungus gnats, lace bugs, leafrollers, leafminers, Lygus bugs, mealybugs, spider mites, scale, thrips, whiteflies

For use on ornamentals indoors in commercial greenhouses. Product is a total release aerosol, for best results apply during early evening when foliage is dry and temperature is between 60°-80°F. Make one to three applications per week depending on the severity of the infestation. Do not apply product within 48 hours of a previous application. See label for specific rates and instructions.

*TetraSan etoxazole 5%WDG 59639-108 12 10B

Registered against: mites

For use in greenhouses, shadehouses, and interiorscapes and on outdoor ornamentals. Product is a miticide that controls major tetranychid mite species in egg and nymph stages of growth. Product will not kill adult mites, but it is transovarial, meaning that treated adults will not produce viable eggs. Product has strong translaminar movement within plant leaves. Spray contacting the upper surface of leaves will absorb into the leaves and locally translocate within the leaf. For resistance management, apply product no more than two times per cropping cycle or no more than two times per six months. Do not apply to poinsettia after bract formation. See label for complete plant list, rates, and specific instructions.

Triact 70 neem oil 70%EC 70051-2-59807 4 18B + NS

Registered against: aphids, leafhoppers, mealybugs, mites, scale, whiteflies

For use on plants in and around commercial nurseries, greenhouses, and interiorscapes. Do not apply to wilted or otherwise stressed plants, or to newly transplanted materials before root establishment. Do not apply to known sensitive plants without prior testing. Product not suggested for use on cut roses. Do not spray on impatiens flowers. Product is also a fungicide. See label for specific rates and instructions.

TriStar 30 SG acetamiprid 30%SG 8033-94-1001 12 4/

Registered against: aphids, beetles (adults), caterpillars, fungus gnats (larvae), leafhoppers, leafminers, mealybugs, plant bugs, sawflies, scale, thrips, whiteflies

For use in greenhouses, lathhouses, shadehouses, and on outdoor ornamentals. Do not make more than 5 applications per year and do not reapply more than once every 7 days. Product is applied as a foliar spray and thorough coverage is important. Product can also be applied as a directed spray to soil media to control fungus gnat larvae. Product is compatible with many surfactants, miticides, and insecticides. See label for complete plant list, rates, and specific instructions.

TriStar 70 WSP acetamiprid 70% WSP 8033-22 12 4A

Registered against: aphids, beetles (adults), caterpillars, fungus gnats (larvae), leafhoppers, leafminers, mealybugs, scale, thrips, whiteflies

For use in greenhouses, lathhouses, shadehouses, and on outdoor ornamentals. Do not make more than 5 applications per year and do not reapply more than once every 7 days. Product comes in water-soluble bags, and is applied as a foliar spray. Product can also be applied as a directed spray to soil media to control fungus gnat larvae. See label for complete plant list, rates, and specific instructions.

Ultra-Pure Oil petroleum oil 98% 69526-5-499 4 M

Registered against: aphids, fungus gnats, leafminers, mealybugs, scales (soft and hard), spider mites, thrips, whiteflies

Product is labeled for greenhouses, nurseries, container gardens, bedding plants, flowering and foliage plants, vegetables and herbs. Follow label directions. See label for plant safety information.

*Up-Star SC bifenthrin 7.9% F 70506-23 12 3

Registered against: ants, aphids, bagworms, black vine weevils, caterpillars, centipedes, crickets, cutworms, earwigs, flea beetles, fungus gnats, grasshoppers, Japanese beetle (adults), lace bugs, leafhoppers, leafminers, leafrollers, mealybugs, millipedes, mites, plant bugs, scale, sowbugs, thrips, weevils, whiteflies

For use on ornamentals and flowers in greenhouses, nurseries, shadehouses, and lathhouses. Do not apply when a temperature inversion exists. Use as a foliar application. Can be used as a drench application for larval control – see label for specifics. See label for complete plant list, insect list, and specific rates and instructions.

*Wisdom Flowable bifenthrin 7.9% F 5481-519 12 3

Registered against: ants, aphids, bagworms, black vine weevils, centipedes, crickets, cutworms, earwigs, flea beetles, fungus gnats, grasshoppers, Japanese beetle (adults), lace bugs, leafhoppers, leafminers, leafrollers, mealybugs, millipedes, mites, plant bugs, scale, sowbugs, thrips, weevils, whiteflies For use on landscape ornamentals and in greenhouses. Use of an alternate class of chemistry in a treatment

program is recommended to prevent or delay pest resistance. May not be effective against some aphid populations due to insecticide resistance. Thorough coverage is important. Product can be used for larval

Trade Name Chemical Name/Formulation EPA Reg. No. REI§ Chemical Class

control in potting media of containerized plants – see label for preventative and curative treatment recommendations. See label for specific rates and instructions.

NOTES:

*Restricted-use pesticide; may be purchased and used only by certified applicators or used by someone under the direct supervision of a certified applicator

† Not for use in Nassau and Suffolk Counties; pesticide labels that indicate "Not for use on Long Island, N.Y." means that use is prohibited in Nassau and Suffolk Counties only.

Trade or brand names in this summary are given with the understanding that endorsement is not intended or criticism implied for those products not mentioned. Other labeled formulations may also be available for use. Read label carefully before using any of these chemicals.

A suitable spreader sticker might improve efficacy on plants having glossy or waxy leaves. However, be sure to follow label directions/precautions, and test for phytotoxicity on a few plants before extensive use.

¹Chemical Classes: Refer to Table 7.3.1 for Mode of Action classifications
