

Bumble Bee (*Bombus ternarius*)¹

Bumble bees are large (10 to 23 mm in length), hairy, ground-nesting bees. Some species, such as *Bombus impatiens*, are used to pollinate greenhouse crops.

Honey Bee (*Apis mellifera*)²

This European species is used for pollination and for honey, propolis, and beeswax production. Bees are 10 to 15 mm in length and colonies survive winter on stored honey.

Leafcutter Bee (*Megachile* sp.)³

Leafcutter and mason bees are solitary, 3 to 20 mm in length, and usually nest in cavities. Leafcutter bees use bits of leaves and flowers to wrap brood cells for their young.

Blue Orchard Bee (*Osmia lignaria*)⁴

The blue orchard bee is a mason bee that uses mud to divide its brood cells. This bee belongs to the same family as leafcutter bees and is an important fruit pollinator.

Mining Bee²

Mining bees can be as small as 2 mm or as large as 25 mm in length. All species nest in the ground. Some species are important apple pollinators and can move more pollen than honey bees!

SAVE THE BEES: PLANT FLOWERS AND TREES!

Pollinators require nectar and pollen plants.

Sweet bees are small, often brightly-colored bees that nest in the ground or in wood.²

Trees, shrubs, and flowers that bloom from April to September create a consistent food supply for pollinators to complete their life cycles. Ground covers (ajuga, squill, crocus, clover, creeping Charlie) are also favorable.

In spring, overwintering female bees emerge from sandy soil to forage and do not return to the overwintering sites. Do not kill these bees; doing so prevents future generations. In fall, large females appear again. Bees are unlikely to sting; simply avoid making sudden movements that may startle them.

Wasps such as yellowjackets, paper wasps, and hornets are sometimes mistaken for bees. They are seen at picnics in late summer when their nests are empty. Wasps are beneficial predators and should be left alone if possible. If control is absolutely necessary, containers of sugar water will trap them.

Pesticides can harm pollinators. For more information visit www.entomology.umn.edu/cues/pollinators

Don't be fooled! Predatory wasps and hornets can be found on flowers too.⁵

Native Plants

Garden Plants

	Early Season	Early-Mid Season	Mid Season	Mid-Late Season	Late Season
Native Plants	 Serviceberry (<i>Amelanchier</i> species) ⁶	 Wild rose (<i>Rosa</i> species) ⁶	 Purple prairie clover (<i>Petalostemum candida</i>) ⁶	 Anise hyssop (<i>Agastache foeniculum</i>) ⁶	 New England aster (<i>Symphotrichum novae-angliae</i>) ⁷
	 Pussy willow (<i>Salix discolor</i>) ⁶	 Basswood, linden (<i>Tilia americana</i>) ⁸	 Swamp milkweed (<i>Asclepias incarnata</i>) ⁷	 Wild bergamot (<i>Monarda fistulosa</i>) ⁷	 Goldenrod (<i>Solidago</i> species) ⁶
	 Carolina lupine (<i>Thermopsis villosa</i>) ⁶	 Garden sage (<i>Salvia nemorosa</i> 'May Night') ⁷	 Billard's spiraea (<i>Spiraea x billardii</i> 'Triumphans') ⁹	 Sunflower (<i>Helianthus</i> species) ⁶	 Korean angelica (<i>Angelica gigas</i>) ¹⁰
	 Siberian squill (<i>Scilla siberica</i>) ¹¹	 Catmint (<i>Nepeta x faassenii</i>) ⁷	 Catnip (<i>Nepeta cataria</i>) ¹²	 Globethistle (<i>Echinops</i> species) ¹³	 Stonecrop (<i>Sedum</i> species) ⁷
